Bria – Data Sheet

CounterPath Multimedia Communicator - Bria

A catalyst for the evolution of VoIP communications

Bria is expanding the softphone experience by making it even easier to make VoIP and video calls, see when your contacts are available and send Instant Messages. Enjoy multimedia communications in a dynamic new way with Bria.

User Interface (UI)

Focused around your address book rather than the dialpad, Bria's contact-centric interface gives you more ways to make, receive and manage your calls and IMs. Detach trays, hide/show dialpad, drag-and-drop and much more.

Advertising

The dynamic layout of Bria's tabbed windows allows Service Provider and OEM customers the ability to incorporate revenue generating advertisements into the communicator such as banner ads, click-to-call and interactive video messaging.

Deskbar

With the click of a mouse, minimize Bria to a deskbar from which you can make and receive calls.

Branding Flexibility

Designed to meet accessibility standards and to support multiple languages, Bria's new skinning engine provides Service Providers and OEMs with increased options to create customized skins. Users will also be able to change the look and feel of the communicator at runtime.

Bria Professional

Bria Professional version is designed for business and enterprise users.

In addition to the features available in Bria, Bria Professional offers additional capabilities including:

- LDAP integration
- DHCP discovery (Provisioning Server)
- Flexible login options
- Enhanced installer options
- Auto answer
- Increased security with SRTP media encryption
- Busy Lamp Field (BLF) workgroup creation (RLS server required)
